FIREWALL VM-SERIES: DEPLOY INLINE SECURITY IN GOOGLE CLOUD PLATFORM (EDU-176)

Overview

Firewall VM-Series: Deploy Inline Security in Google Cloud Platform is a self-paced digital learning course with about 1.5 hours of narrated modules, demonstrations, and knowledge check questions. It provides learners with a basic overview of GCP services used to provide on-demand cloud computing and shows learners how to configure and deploy a VM-Series firewall in GCP. After learners have completed this course, they can take a specific course for deploying a VM-Series firewall in Amazon Web Services or Microsoft Azure (see the graphic).

This course will help the learner to:

- Describe the different GCP native services
- Describe the process for deploying a firewall in GCP

Course Objectives

This course is an overview of the different compute, networking, storage, and other GCP services. The course describes the process for creating a GCP account, setting up your GCP environment, and deploying a VM-Series firewall in your GCP account.

Scope

- **Course level:** Introductory
- **Course duration:** About 1.5 hours
- **Course format:** Narrated courseware, demonstrations, and knowledge check questions

Target Audience

Prerequisites

Learners should have completed Firewall VM-Series: Introduction to Virtualized Inline Security in Public Cloud (EDU-170).

This digital learning course is available at the Learning Center.
