

Unlocking Productivity and Security with Modern Enterprise Password Management

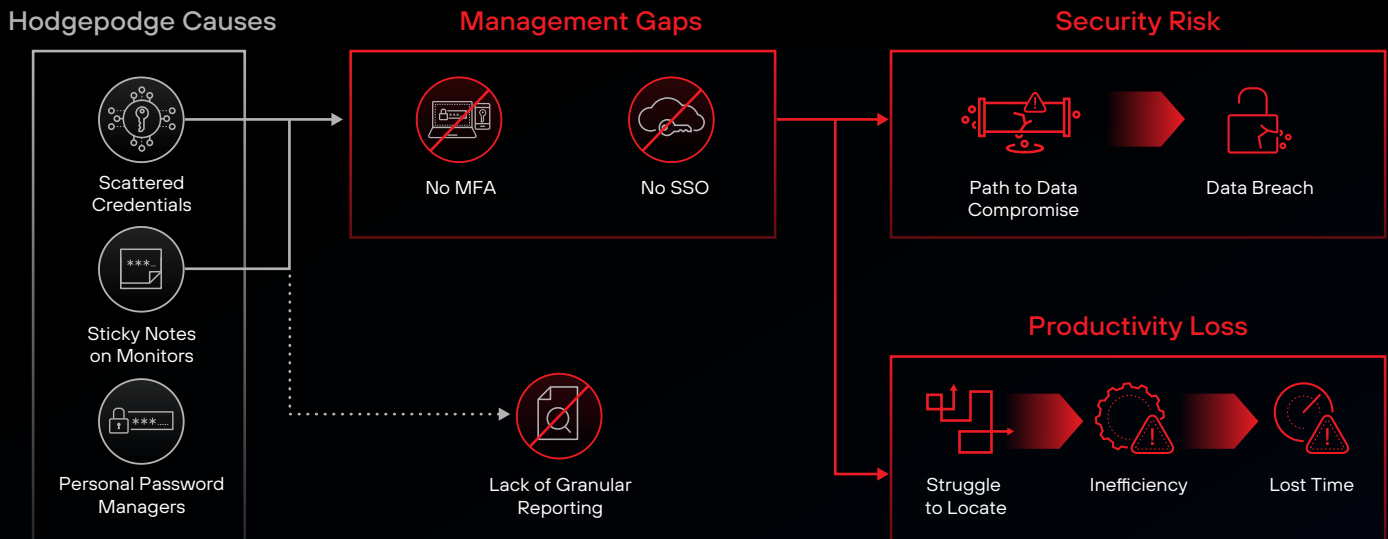

Passwords have proliferated as employees and contractors use more applications than ever. Effectively managing today’s jungle of passwords can reduce risk, increase productivity, and resolve management and compliance burdens. Learn how Idira™ Workforce Password Management, by Palo Alto Networks, takes a comprehensive approach to enterprise password management.

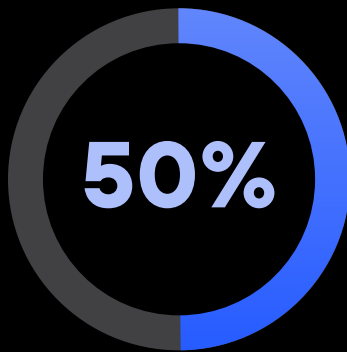

The Enterprise Password Conundrum

While passwords provide access to applications, enterprises typically have passwords scattered across the environment, with many employees using personal password managers or sticky notes on monitors. This hodgepodge approach leaves gaps, lacks single sign-on (SSO) and multifactor authentication (MFA), and does not provide granular reporting. While SSO can help alleviate the password problem, it doesn’t support many applications.

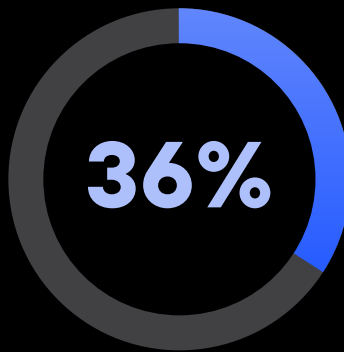

Password sprawl poses security risks, as a compromised password is a path to data compromise. Poor password management also hinders productivity, as employees struggle to locate credentials and then plug them into login screens.

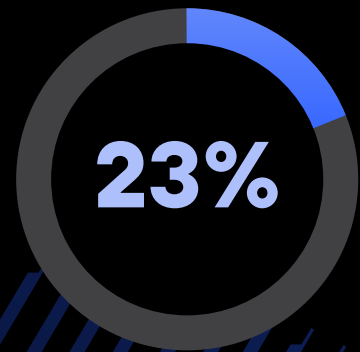

Current Security Statistics

of organizations report that users storing workforce passwords or credentials in personal browsers or password managers contributed to the compromise or suspected compromise of their organization's workforce accounts or credentials.¹

of organizations know or suspect they have had workforce accounts or credentials compromised.²

of organizations report password sharing contributed to a compromise or suspected compromise of their workforce accounts.³

Idira Workforce Password Management for the Enterprise

Idira Workforce Password Management takes the sting out of password management. The enterprise password vault stores credentials securely for everyday use and provides a single password source to help overcome the password sprawl problem. The vault can enforce security controls, like SSO and MFA, as well as provide a user-friendly method for users to securely share credentials, notes, or files. This approach provides oversight for both IT and security teams to control risk and satisfy audit and compliance requirements.

Key Pillars of Idira Workforce Password Management

Security-First Password Vaulting

Security and IT teams can centrally manage how passwords are stored, managed, and retrieved.

Save Password Management and Sharing

Security teams can gain control over who uses passwords and when. Users can securely share credentials without revealing the actual password.

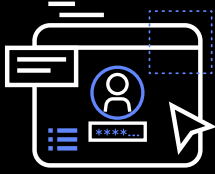

Visibility for IT and Security Teams

A robust enterprise password management solution can provide visibility into access activity to understand which users have accessed a particular application at a particular time.

Improving the User Experience and Security

Idira Workforce Password Management solves the password sprawl problem. Doing it effectively facilitates enterprise productivity, significantly improves security, and lays the groundwork to deploy adjacent solutions in an efficient and cost-effective way.

A Frictionless, Secure User Experience

Users can step beyond plugging in passwords to get right to work with autofill for credential fields, smoothing out the login experience. Users improve their security by automatically generating complex passwords for optimal security hygiene.

IT and Security Time Savings

Effectively managing passwords avoids the burden of password resets and improves the enterprise compliance posture. Security and IT teams can spend less time responding to password-related trouble tickets and more time on impactful projects.

A Path to Passwordless and Beyond

Deploying an enterprise password manager as part of an integrated platform lays the groundwork for adoption of other identity security-related technologies and facilitates moving beyond passwords altogether.

Secure Password Management for Efficiency and Productivity

Organizations of all sizes continue to struggle in solving the password management challenge. They want a password management solution that delivers security while improving efficiency and productivity. Idira Workforce Password Management, an integrated part of Idira Security Platform, solves your password challenges, providing identity security value today and into the future.
